PANCOM CIRCULAR 30.12.2002

Greetings colleagues & friends in Oz,

I want to introduce you to Tyrone LaFay, a graduate of PLANET Organic - our year-long permaculture course in NZ. (this email also sent as an attachment here)

P.L.A.N.E.T. Organic is a vocational training programme in organic production systems, sustainable landuse design and wholistic resource management, with application to bioregional organisation and community development. It is for highly motivated people who want to grow healthy food, create a balanced ecosystem and foster a flourishing culture.

PLANET Organic is a programme of the Institute of Earthcare Education Aotearoa (EEA) in New Zealand: a non-profit Charitable Trust committed to the ethics and practices of sustainability. (If the content of PLANET Organic is of interest to you, please email me, Robina, for an attachment).

I have encouraged Tyrone to write to you all who have links with eco-village developments in Australia. Tyrone has specialised in participatory eco-village design during this year. I would appreciate it if you could network this letter with appropriate organizations and individuals. I highly recommend him for any potential work in human settlement development.

Warm regards, Robina McCurdy

-----  
 Hi everyone, my name is Tyrone LaFay. I have just completed a year of great learning here in NZ and am highly motivated to get involved in an eco-village project. I know that you all must be busy in these holiday times and I appreciate any energy put towards responses to this e-mail, as my visa here in NZ expires Jan. 29th, 2003.  
 My email: [biotribecascadia@yahoo.com](mailto:biotribecascadia@yahoo.com)

Briefly, my educational background is:  
 BSc Environmental Science: Sustainable Ecological Design from Huxley College @ Western Washington University, Bellingham, Washington state, USA: 2000

At WWU, I became very involved in the 5-acre organic farm on campus known as the Outback Farm/Outdoor Experiential Learning Site (OELS). Some of my experiences include: teaching Applied Human Ecology: Sustainable Systems class at Fairhaven College where we used the farm as the classroom; co-founded and wrote grants for the Outback Farm Renewable Energy Project; for two years, was the site co-ordinator for the annual community event Earth Day in the Outback festival; co-ordinated an Outback Farm benefit concert to raise money to keep campus development away from the farm; and was a founding member and president of the WWU Associated Students club Sustainable Futures who oversaw the programs at the Outback Farm.

Permaculture Design Certificate from Michael Pilarski @ Herb 'N Relief Farm

PANCOM CIRCULAR 30.12.2002

- Methow Valley, Washington state, USA: 1999

PLANET Organic (Institute of Earthcare Education Aotearoa): Diploma in Sustainable Land-use Design, and Certificates in: Organic Production, Applied Permaculture & Sustainable Resource Management; and Community Development & Land-use Project Management.

For 'PLANET Organic's 6 week vocational placement component, I went to NSW, and was mentored by Robyn Francis of ERDA Institute Trust, Djanbung Gardens & Permaculture Services. I worked on the Nimbin Eco-Village Project, an initiative of Permaculture Services and business partners who formed Nimbin Ecovillage Pty Ltd. My work was to ensure that the needs and wants of the Nimbin community were integrated into the design of the Nimbin Eco-Village Project, and thus formed the foundational driving force. The research question I addressed was: "How can community participation and community ownership most effectively be included in ecovillage planning?"

Some of the process and analysis tools I used were: identification of ecovillage development stages, affinity and matrix diagrams, collation & theming. interviews with stakeholders. The outcome of my research work was a draft strategy for the second stage of Community Consultation.

During my time in Australia, I attended two ecovillage courses with:

- (1) Ecovillage & Sustainable Communities Design at Djanbung Gardens, with Peter Cuming & Robyn Francis.
- (2) Ecovillage Design & Practicum at Crystal Waters, with Max Lindigger

I am currently working long-distance with a colleague from 'Village Design Institute' in USA, to develop a Pattern Language for Ecovillages. My lifestyle goal is to be an ecovillage resident. My vocational goal is to work as a designer & consultant in the development of sustainable human settlements.

I am now ready for a paid position (whether apprenticeship or self-directed) within an ecovillage group/project. My preference is to work with a team of experienced people, one of whom can provide some degree of mentorship. I am able to offer skills I have acquired in the past few years, including facilitating small-scale community consultation, organisation, research, preparing & giving presentations, field work, permaculture design, drawing up plans and hands-on practical work.

I will be available to travel from New Zealand to Australia to begin work on 1st February 2003. On request, I am willing to email any interested parties my CV, and dialogue by email or phone.

Permacordually Yours,  
Tyrone LaFay
