UTS: Public Research Lecture

"Is the Australian dream killing us?"

Professor Derek Eamus

A thought provoking and contentious talk about the management of land and water in Australia, the great Australian population debate we never have and the influence of the Australian lifestyle on our ecological footprint.

Key issues that will be discussed include:

- > Can Australia support a population of 50 million?
- > Have our traditional Eurocentric water and land management practices led us to our own Apocalypse Now?
- > Who owns the rain that lands on our drought plagued land?
- > Is there a link between environmental health and public health?

Derek Eamus is Professor of Environmental Science and Director of the Institute for Water and Environmental Resource Management, at the University of Technology Sydney. He has spent 13 years researching, writing and thinking about water in the Australian environment.

Derek is regularly approached by industry and government to consult on water and environmental issues, to interpret science in society and contribute to policy. His latest project involves researching the relationship between water availability and the productivity of Australian landscapes.

This lecture is a must for those interested and involved in the management of Australia's future.

Date: Tuesday 26th November 2002

Time: 6.00 - 7.00pm

Refreshments will be provided from 5.30pm

Venue: University Hall
Building 4, Faculty of Science
University of Technology, Sydney
Harris St, Broadway
